DNA encoding tumour necrosis factor receptor-associated factor binding molecule - used for modulation or mediation in cells of the activity of NF-kB

Claim 4; Fig 4; 127pp; English.

The present sequence encodes a protein designated NMP1, a TRAF2 binding protein. This protein contains Ser/Thr protein kinase motifs. A full length cDNA clone encoding NF-kappas (NIK) was obtained by PCR using the present clone, clone 10. The clone 10 protein is capable of binding to at least amino acids 222-501 of TRAF2. The TRAF-2 binding proteins can be

```
840
any other intracellular signalling activity modulated or mediated by TRAF2. TRAF-binding proteins are especially used for prevention or treatment of pathological conditions associated with NF-kB induction, e.g. acute hepatitis, autoimmune-induced cell death, e.g. death of the beta langerhans cells or the pancreas that results in diabetes, the death of cells in graft rejection, the death of oligodendrocytes in the brain in multiple sclerosis, and AIDS-inhibited T cell suicide which causes proliferation of the AIDS virus and hence the AIDS disease. The proteins which are useful for screening of ligands capable of binding to a protein, which are useful for modulating cellular activity modulated/mediated by TRAF2.
                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     540

The present sequence encodes a NF-kappa inducing kinase (NIK). The full conditions are detectively than TRAF2. Proteins count to induce NF-kappa even more effectively than TRAF2. Proteins capable of binding to TRAF2 and NIK were identified. The NIK or TRAF-2 binding proteins can be used for modulation or mediation in cells of NF-kappaB activity or any other intracellular signalling activity modulated or mediated by TRAF2. TRAF-binding proteins are especially used for prevention or treatment of pathological conditions associated with NF-kappaB induction, e.g. acute hepatitis, autoimmune-induced cell death, and induction, e.g. acute hepatitis, autoimmune-induced cell death, c.g. death of the beta LangerThans cells or the pancreas that results in diabetes, the death of cells in graft rejection, death of cells in graft rejection, the death of cells in graft rejection, death of cells in graft rejection, death of cells in graft rejection, death of cells in graft rejection, death of cells in graft rejection, death of cells in graft rejection, death of cells in graft rejection of the AIDS virus and hence the AIDS disease. The proteins are also useful for screening of ligands cappable of binding to a protein, which are useful for modulating cellular activity modulated/mediated by TRAF2
                                                                                                                                                                                                                                                                                                                           DNA encoding tumour necrosis factor receptor-associated factor binding molecule - used for modulation or mediation in cells of the activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CTGCAGCGGAGCTGGGAGGGAAGGTGAACCGGGCACTACAGCAAGTGGGAGGTCTGAAGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal crivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food of sites expressing (II). (I) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2159

                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method of determining whether a patient will respond to treatment with a farnesyl transferase inhibitor (FTI), by analyzing the expression of gene that is differentially modulated in the presence of an FTI. The method is useful for determining whether a patient will respond to treatment with a FTI such as (B)-6-[amino(4-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Determining whether a patient will respond to treatment with a farnesyl transferase inhibitor, by analyzing the expression of gene that is differentially modulated in the presence of the inhibitor.

     according to prognosis by determining the similarity between the level of expression of each of five genes for which markers are listed in the specification, in a cell sample taken from the breast cancer patient, to control levels of expression for each respective five genes to obtain a pattent similarity value. The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products are useful for data analysis using the diagnostic, prognostic and statistical methods of the invention. This sequence corresponds to a marker used in the method of the invention.

are associated with Carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of bioactive agent capable of bioactive agent capable of anounlating the activity of CAP; (ii) for screening of evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vii) for inhibiting the activity of CAP; (vii) for treating carcinoma; (vii) for neutralizing the activity of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DAA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA gene sequence. Note: This patent is an equivalent to basic patent
     carcinoma
                                                                                                                                                                                                                                                                                   present invention relates to novel DNA and protein sequences which
Recombinant nucleic acid useful for diagnosis and treatment of comprises a nucleotide sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1154
                                                                                                                                                                                                                                                                                                                                      The invention relates to 2495 novel polynucleotides (I) and their encoded polypeptides, sequences hybridizing to these nucleotides, sequences encoding partial polypeptides and sequences having 70% to 90% identity to the nucleotide and protein sequences. The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morbid states. They are also useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, dementia and various cancers. This sequence corresponds to a nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TACCTCTGTCCTCCCTGGAGCCAGCCCCTGCCAGAAACCCCAGCTCACCAGAGCGGGAAAG 1094

This sequence encodes a novel human nuclear factor-kappaB (NFKB)-inducing kinase (NIK) which is used in a method for screening for agents that modulate the interaction of NIK with a NIK-binding target. The encoded protein can be used as a modulator of cellular functions at the NIK level, or for development of such compounds. NFKB is involved in expression of many immune and inflammatory responses and of some important viral genes. The protein may be used diagnostically and therapeutically, in conditions associated with abnormal utilisation of pathways that involve NFKB, e.g. inhibition of signal transduction by tumour necrosis factor (TNF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TACCTCTGTCCTCCCTGGAGCCAGCCCTGCCAGAAACCCCAGCTCACCAGAGGGGAAAG 2287
                                                                                                                                                                                                                                                                                                                                                                           Screening agents for modulating interaction of nuclear factor kappaB inducing kinase - with kinase-binding target, useful for controlling levels of the kinase, for treatment and diagnosis of conditions associated with e.g. inhibition of signal transduction by tumour necrosis
tumour necrosis factor; NF-kB-inducing kinase; screening; interaction; modulator; immune response; inflammatory response; viral gene; diagnostic; therapy; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2048 ACCAGACCCTCCATGCCCAGCCGAGAGAGACTTTCGCCAAGGGCCCCCAGGGCCCCGGCCAG

                                                                                                              This cDNA encodes a nuclear factor kappa B (NF-kB) inducing kinase (NIK) polypeptide or its fragment has one or more activities selected from kinase activity and inhibitory activity. IkB kinase-alpha and beta binding activity and binding inhibitory activity; IkB tumour necrosis factor (TNF) receptor-associated factor 2 binding activity and binding inhibitory activity; IkB binding activity and binding inhibitory activity. IkB binding activity and binding activity and binding inhibitory activity. We captor-associated factor 2 binding binding inhibitory activity, IkB binding activity and binding activity and binding activity and binding activity and binding activity activity. A vector containing the NIK nucleic acid can be used to transform host cells for the recombinant production of the protein. The NIK nucleic acid and the polypeptide may be used in diagnosis (e.g. genetic hybridisation server from the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the containing the conta

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This cDNA encodes a nuclear factor kappa B (NP-kB)-inducing kinase (NIK) polypeptide. The NIK polypeptide or its fragment has one or more activity is selected from kinase activity and inhibitory activity; IkB kinase-alpha and beta binding activity and binding inhibitory activity, its binding inhibitory activity, in binding inhibitory activity, its binding activity and binding inhibitory activity, its binding activity and binding contains activity in the NIK nucleic acid and the polypeptide may be used in diagnosis (e.g. The NIK nucleic acid and the polypeptide may be used in diagnosis (e.g. The nucleic hybridisation screen for NIK transcripts), therapy (e.g. NIK kinase inhibitors to inhibit TW signal transduction), and in the biopharmaceutical industry (e.g. as immunogens, reagents for isolating other transcription regulators, and reagents for screening chemical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GCCCTTGGAGGGGGGAATATAAAGAACCAAGACATCCACCGCCAAATCAAGCCAATTACC

This DNA sequence codes for human wild-type NIK (see AAY31665), a NF-kB inducing kinase having serine/threonine kinase activity. The invention relates to: (a) an N-terminus deletion mutant NIK protein (see AAY3166); that inhibit auto-phosphorylation or transphosphorylation. The invention provides the molecular basis for cytokine induction of NF-kB-dependent immune and inflammatory responses, emphasising a role for both NIK-NIK and NIK-IKK (IkB-specific kinase) interactions. A novel and highly specific method for modulating NF-kB-dependent immune, inflammatory and anti-apoptotic responses is based on interruption of the critical protein interaction of NIK and IKK. The mutant NIK proteins are used in claimed methods for inhibiting NF-kB-dependent genession. The kinase-deficient NIK mutant proteins inhibit activation of IKK. The N-terminal deleticion NIK mutant proteins bind to IKK, thus inhibiting NIK/IKK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        121 GCCCTTGGAGGGGAAATATAAAGAACCAAGACATCCACCGCCAAATCAAGCCAATTACC 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             62302
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      62422
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1171 CCTGAGCCCNTGCCCCANCCCTGCTGAADAAAACAYTNCCGCCACGTGAAGAACAAAGA 1230
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                990
                                                                                                                                                                                                                                                    are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of biodactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vii) for inhibiting the activity of CAP; (vii) for treating carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent
Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.
                                                                                                                                                                                                                         present invention relates to novel DNA and protein sequences which

AAM25563. The proteins can have activities based on the tissues and cells they are expressed in, such as: antiinflammatory; antirheumatic; antiarthritic; immunosuppressive; antianflammatory; antirheumatic; cardiant; cardiant; encorring; cardiant; cardiant; cardians, virucide; anti-HVV; fungicide; antimutagen; cardiavascular; antianeamic; antigargant; haemostatic; vulnerary; antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidabetic; cytostatic neuroprotective; antidepressant; nootropic; antidabetic; cytostatic neuroprotective; antidepressant; nootropic; antidabetic; cytostatic and ingene therapy, antisense therapy and vaccine production, The proteins and polymucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction,
